# The Achmea journey implementing Tosca

Four pillars for the successful introduction  
of a new quality assurance solution

## Achmea at a glance

Founded  
in **1811**

More than **13** million  
customers in  
the Netherlands  
and abroad

**166**  
billion in  
invested assets

**15,636**  
colleagues  
(expressed in FTEs)

**34-hour**  
workweek  
(and never a dull  
moment)

**AA-rating (ESG)**  
and (it goes without  
saying) hefty  
ambitions on  
sustainability

**7**  
different  
countries... and  
counting

# A short introduction

**Joost van Lieshout**

**Testmanager IT Keten Schade & Inkomen**

**John Bertens**

**Change Agent & SAFe Practice Consultant**

Why start a quality assurance  
transformation journey?

# Why SAP Enterprise Continuous Testing by Tricentis (aka Tosca)?

- End-to-end testing solution
- Maturity of tool and satisfied customer base
- Reusability and easy maintenance
- Readily available resources with consultancy firms
- Integration possible with Azure DevOps
- Cover as much risk as possible with minimal effort
- Close relationship between SAP and Tricentis
- Strong business case

# Approach based on four pillars

- Iterative and incremental
- Follow the rules – break the rules – transcend the rules
- Based on best practices from Tricentis
- Community-driven

# Achmea's Transformation Journey to Continuous Testing

“There are some things that a vendor knows best. Achmea understood that and was eager to learn from us. With Achmea it was clear they **WANTED** to work with us, not because someone ordered them to work with us.”

A hand is shown moving a black chess piece on a chessboard. The background is dark and slightly blurred, focusing on the hand and the piece.

# Less is more – setting up a ‘risk catalog’

---

- Don't try to test and automate everything
- Choose test cases based on value to business processes and value for customer
- Testing less, costs less
- Be transparent towards stakeholders about what you are testing and what you are not testing
- Added benefit: better working relationship across divisions

### About this document

This document outlines recommended practices for test automation with Tricentis Tosca within Achmea. Its purpose is to provide guidance to Achmea's testing teams, and other stakeholders on the most effective and efficient methods for implementing test automation.

The target audience for this document includes all members of the testing team, as well as any developers or stakeholders who are involved in the testing process. It is assumed that readers have a basic understanding of Tricentis Tosca concepts and terminology as well as software testing in general.

This document is divided into several focus topics, each covering a different aspect of test automation. It's structured in 3 main sections:

- Section 1: Tricentis Continuous Testing Approach
- Section 2: Achmea Way of Working: how to be compliant to the Playbook
- Section 3: Process View – covering key aspects within ongoing testing as well as the Test Case Lifecycle
- Section 4: Governance View – covering standardization to ensure reusability aspects.

It is important to note that this document is not intended to be prescriptive or complete. Instead, it offers a set of recommendations based on Tricentis Best Practices. It is meant to serve as a starting point for developing and refining Achmea's approach to test automation.

Recommendations within this document are based on current work with Achmea in the Pilot Phase as well as the Continuous Testing Maturity Assessment (CTMA) for the division S&I conducted in Feb 2023.

### Document Version History

Version	Date	Updated by	Notes
0.1	Apr-12, 2023	Melanie Ambros (Tricentis)	Document created; Chapter 1 added; Chapter 3 in progress
0.2	Apr-27, 2023	Melanie Ambros (Tricentis)	Minor updates in Chapter 1 & 3
0.3	May-25, 2023	Melanie Ambros (Tricentis)	Chapter 2 added; Updates in Chapter 1 & 3
0.4	Jul-28, 2023	Melanie Ambros (Tricentis)	Changed document title, new chapter 2 added; updates/extensions in chapter 3&4 (previously 2&3)
1.0	Sept-20, 2023	Melanie Ambros (Tricentis)	Updates/Extensions and clean-up of non-Playbook topics in chapters 2-4

### 1. Tricentis Continuous Testing Approach

The increased speed in Software Development requires testing to become faster, while maintaining quality at the same costs. Tricentis' answer to this challenge is its Continuous Testing Approach.

#### 1.1. Increase Test Efficiency to control Cost, Speed and Quality

Cost, Speed and Quality are the most common metrics in testing, still all three influences each other:

- Costs cannot be reduced, without a negative impact on speed and/or quality.
- Speed cannot be improved, without reducing quality and/or increasing costs.
- Quality cannot be improved or at least maintained without increasing costs and/or reducing speed.

Additionally, we see a constantly growing need for testing on the market as technology usage is extending and the number of deployed applications – internal or customer facing - is increasing.

The way to control the dependencies within this triangle and still meet the growing testing needs is to increase test efficiency. This is what the Tricentis Continuous Testing Approach address with 2 key elements.

By working with different organizations globally we identified:

- Knowing exactly what to test, enables organizations to achieve the same risk coverage with lower number of executed tests

Same result measured on the number of tests vs. risk-based assessment.

Risk-based testing promotes having a business view on the overall system under test (e.g., an application like SAP or Salesforce, or a customer-facing mobile application) enabling to prioritize what to test based on business processes and the harm they would cause if failing in production. Each test result will include the risk caused by failure or non-execution, or the level of certainty it is added when passed.

A large crowd of people is shown from the chest up, with their hands raised in the air. The background is a plain, light-colored wall. The overall tone is positive and communal.

Long live the community

Scale

Business Case	10 km

# Results

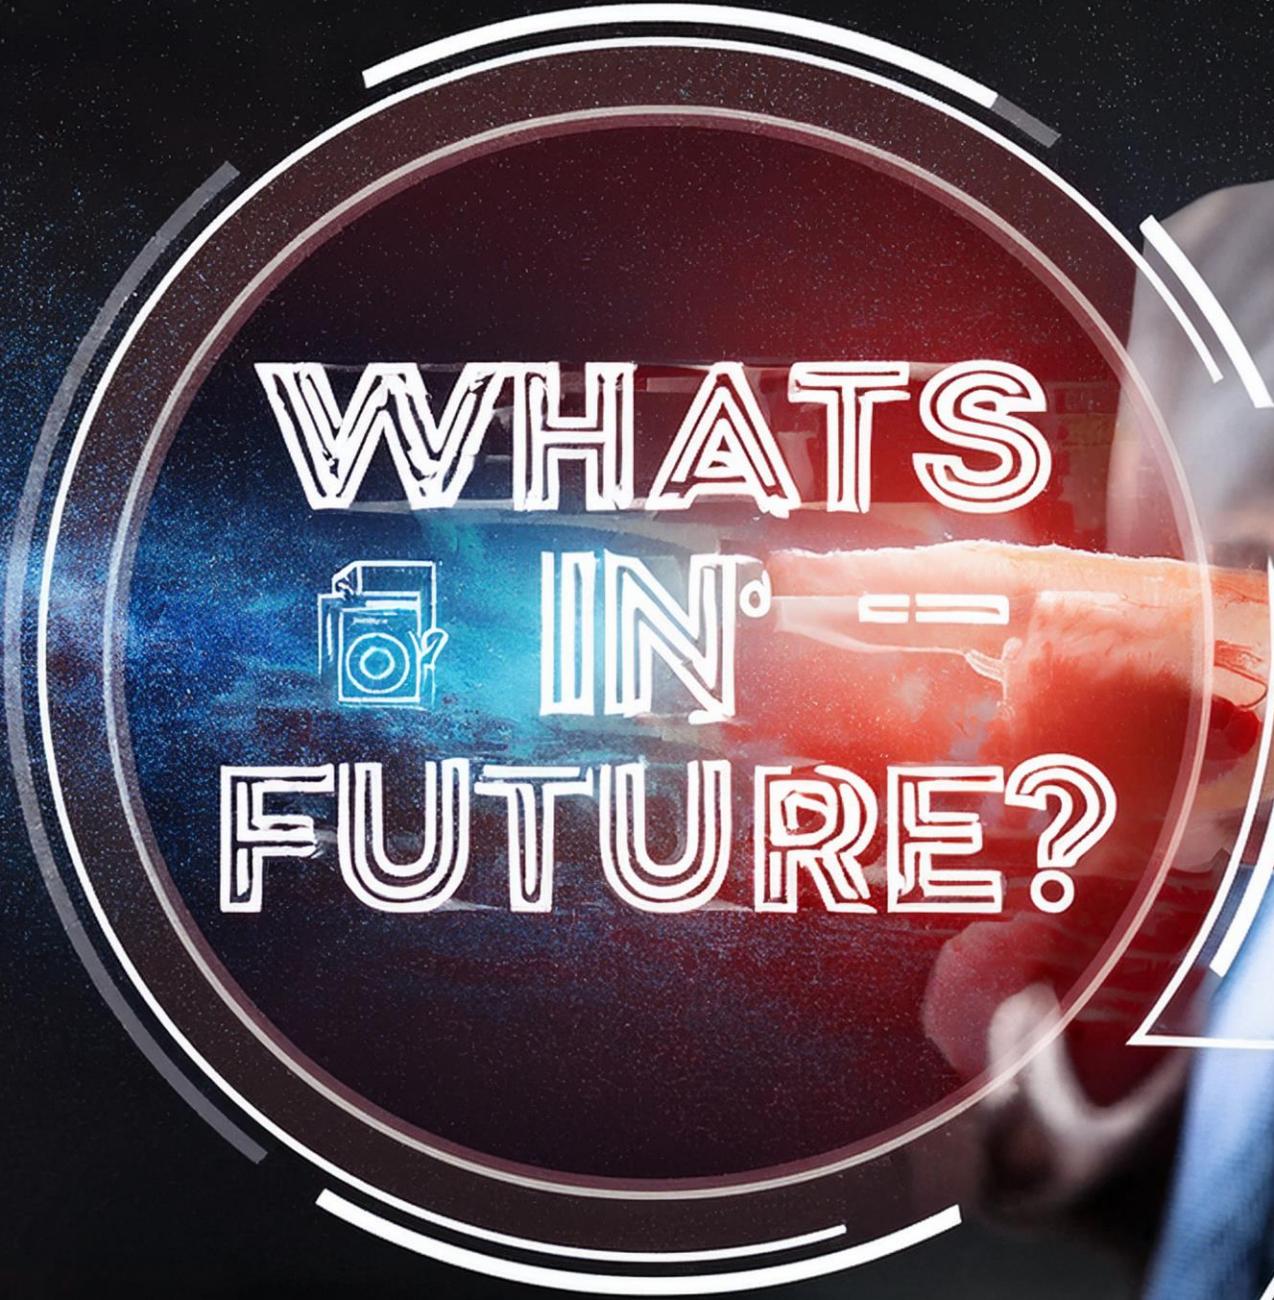

# Results after 24 months – beyond expectations

- 
- Short(ish) learning curve
  - Think first, Automate second
  - Exponential increase in speed
  - Support for multiple technologies
  - Shift left is actually happening
  - Teams are happy

# Six lessons learned

1. Have and keep management buy-in
2. Use the experience of your vendor to accelerate the journey
3. Don't implement a tool. Implement a methodology, a way of working and a mindset
4. Build your community from day one
5. Communication and governance are key
6. It's a continuous journey, beyond the tools selection

WHATS  
IN THE  
FUTURE?

Do you want to exchange experiences?
